Metrivet

OXYTETRACYCLINE

COMPOSITION

Each ovule of **Metrivet®** contains:
Hydrochloride oxytetracycline..500 mg

- Prevents and controls uterine infections.
- Increase the herd`s reproductive efficiency.
- Decreases the intervals between births.

Useful in the prevention and control of uterine infections caused by:
-Placental retention.
-Uterine waste.
-Difficult births or dystocias (forced extraction, fetotomy, caesarean section).

Directly attacks the focal point of the infection: Turns into foam, therefore spreading throughout the uterine tract

Easy application: Goes directly into the uterus, without de need of uterine flushes.

DOSE: Introduce 2 ovule directly into the Uterus, in case of an acute infection introduces 4 ovule directly into the Uterus.

Effervescent Ovules

Contains obstetric sleeves

Presentation:
Box of 12 ovules.
